

ERGOCOM

- ergonomic handle for hydraulic crimp heads

With the Elpress **ERGOCOM**, Elpress R&D has integrated in-house experience with technology and modern design, to improve operator comfort and developed an ergonomic handle reducing the physical stress for operator within the working environment.

With the new design, the centre mass of the tool is now closer to the handle. This decreases torque in the wrist and makes the tool more ergonomic and comfortable to use. The Elpress **ERGOCOM** communicates wirelessly via blue-tooth, therefore potential inconvenience with signal cables is avoided.

The Elpress **ERGOCOM** with wireless communication is supplied together with new PS710E hydraulic pumps. For existing users of PS710E hydraulic pumps who want the ergonomic benefits from the new handle, there is a compatible wired version called: Elpress **ERGO**. Elpress **ERGO** is supplied with new PS710R hydraulic pumps.

Wireless communication with pump PS710E

- Ergonomic handle
- Bluetooth technology
- Quick change crimp heads and cutting tools
- Very low energy consumption
- High protection if energized cables are accidentally cut
- Handle also available with signal cable

*Wireless **ERGOCOM** not available in USA and Canada.*
